

Branch and Details:

- **prod** - It is the production branch. We push the code to this branch when all the works completed, tested and passes the project objective. We merge '**stage**' branch to '**prod**' branch.
- **stage** – It is stage branch. We push the code to this branch weekly after the step presentation class and **week_*** branch has been tested and passed.
- **Week_*** - This is the weekly branch that we make from either '**stage**' or previous week '**week_***' branch. In this weekly branch, we merge the code when task that team member were assigned has been finished or in rare case when there is dependency of the team member code that other team member might need to start their tasks.
- **Team_member*_branch_name** - For every new task, each member should create a new branch from that week's '**Week_***'. Before recreating new branch from '**Week_***', check your local '**Week_***' is up to date with remote '**Week_***'. If it is not up to date, then update it first by pulling the remote branch.
- ***** in '**Week_***' refers to week_number. Eg: week_one, week_two, week_three, and so on.
